

- M-12. Nad promjerom kruga polumjera $\sqrt{6}$ konstruiran je jednakostranični trokut sa stranicom duljine $2\sqrt{6}$. Površina dijela trokuta izvan kruga je
- A. $\pi - \sqrt{3}$ B. $3\sqrt{3} - \pi$ C. $6 - \pi$ D. $2\sqrt{3} - \pi$ E. $\sqrt{3} + \pi$

Nacrtajmo prvo tu sliku:

Spojimo sada točke D i S te S i E
Dobili smo dva istostranična trokuta
kojima je duljina stranice $= r$
i jedan kružni isječak s $\alpha = 60^\circ$
Površinu P_D djela trokuta izvan kruga
dobijemo tako da od površine
trocuka ABC odbijemo
površine trokuta ASD, SBE i
površinu $P(\alpha)$ kružnog isječka ESD
$$P_D = P_{\triangle ABC} - (P_{\triangle ASD} + P_{\triangle SBE} + P(\alpha))$$

$$\text{stranica } \triangle ABC = 2r$$

$$\begin{aligned} P_{\triangle ABC} &= \frac{(2r)^2 \sqrt{3}}{4} \\ P_{\triangle ABC} &= \frac{(2\sqrt{6})^2 \sqrt{3}}{4} \\ P_{\triangle ABC} &= \frac{2^2 \sqrt{6^2} \sqrt{3}}{4} \\ P_{\triangle ABC} &= 6\sqrt{3} \end{aligned}$$

$$\text{stranica } \triangle ASD = r$$

$$\begin{aligned} P_{\triangle ASD} &= P_{\triangle SBE} = \frac{r^2 \sqrt{3}}{4} \\ P_{\triangle ASD} &= P_{\triangle SBE} = \frac{\sqrt{6^2} \sqrt{3}}{4} \\ P_{\triangle ASD} &= P_{\triangle SBE} = \frac{6\sqrt{3}}{4} \\ P_{\triangle ASD} &= P_{\triangle SBE} = \frac{3\sqrt{3}}{2} \end{aligned}$$

površina $P(\alpha)$ kružnog isječka ESD

$$\begin{aligned} P(\alpha) &= \frac{r^2 \cdot \pi \cdot \alpha}{360^\circ} \\ P(60^\circ) &= \frac{\sqrt{6^2} \cdot \pi \cdot 60^\circ}{360^\circ} = \frac{6 \cdot \pi}{6} = \pi \\ P(60^\circ) &= \pi \end{aligned}$$

$$P_D = P_{\triangle ABC} - (P_{\triangle ASD} + P_{\triangle SBE} + P(\alpha))$$

$$P_D = 6\sqrt{3} - \left(\frac{3\sqrt{3}}{2} + \frac{3\sqrt{3}}{2} + \pi \right)$$

$$P_D = 6\sqrt{3} - \frac{6\sqrt{3}}{2} - \pi$$

$$P_D = 6\sqrt{3} - 3\sqrt{3} - \pi$$

$$P_D = 3\sqrt{3} - \pi$$
